

COMCAST VIDEO TOWER

The fully customizable Comcast Video Tower comprises 32 NEC video monitors that utilize Ping HD digital signage software. A one of a kind offering, the tower consists of one large canvas that can be viewed as a single full screen or broken down and arranged into multiple screens any way desired. Above the tower is a 16x9 projection fabric that is perfect for displaying logos from glass or metal Gobos.

The tower is an ideal way to display logos, slideshows, videos, PowerPoint presentations, web content and other forms of digital media. It is an eye-catching and memorable way to recognize sponsors.

Our experienced staff will help bring your vision to life, whether you require full custom design services or simply a little guidance to plan the perfect layout.

Please contact your event coordinator or a member of our AV tech services staff to discuss the ideal tower configuration for your event.
